# COVID-19 Vaccine Side Effects

Side effects are <u>normal</u> and are a sign that your body is building immunity. Not everyone will have side effects. If you don't experience side effects, the vaccine is still working.

The vaccine's side effects are typically <u>mild</u> & only last a few days. Side effects might include sore arm, headache, fever, chills, fatigue, or nausea.

The known risks of getting sick with COVID-19 (severe or long-term illness or death) outweigh the risk of mild side effects from the vaccine. The vaccine won't just prevent deaths, it will reduce hospitalizations and <u>help us get back to normal</u>.
